ADVANTAGES

Reduce construction time:

Due to the system approach and in House erection team there is an overall reduction in construction time, cost, and time relative to local contractors.

Design:

Since our design is in-house is mainly formed of standard sections and connections, the design time is significantly reduced, specialized computer analysis custom details.

Erection:

All components are standard like the Screws and related Roofing products based on building geometry. The erection time is faster.

Energy-efficient roof and wall systems:

Buildings can be supplied with polyurethane insulated panels or fiberglass blanket insulation to achieve required “U” values.

Lower cost:

Due to the systems approach, there is a significant saving in design, manufacturing, and site erection cost, the structural elements are shaped to follow the stress diagram of the member, thus reducing weight, cost, and load to foundations, the secondary members, and cladding next together reducing transportation cost, the overall price per square meter may be reduced as much as 30% compared to conventional Building.
